

Enrollment No: 2302030430045

Assignment : 1

Ans 1 :

Step 1: click on the “New” button to create a new repository.

The screenshot shows the GitHub interface for creating a new repository. At the top, there is a button with a code icon and the text "Start writing code". Below this, the heading "Start a new repository for bhavinpachal01" is displayed. A descriptive sentence follows: "A repository contains all of your project's files, revision history, and collaborator discussion." The "Repository name" field is highlighted with a red arrow pointing to it. Below the name field is a text input box with the placeholder "name your new repository...". There are two radio button options: "Public" (with the description "Anyone on the internet can see this repository") and "Private" (with the description "You choose who can see and commit to this repository"). The "Private" option is selected. At the bottom, there is a green button labeled "Create a new repository".

<> Start writing code

Start a new repository for bhavinpachal01

A repository contains all of your project's files, revision history, and collaborator discussion.

Repository name

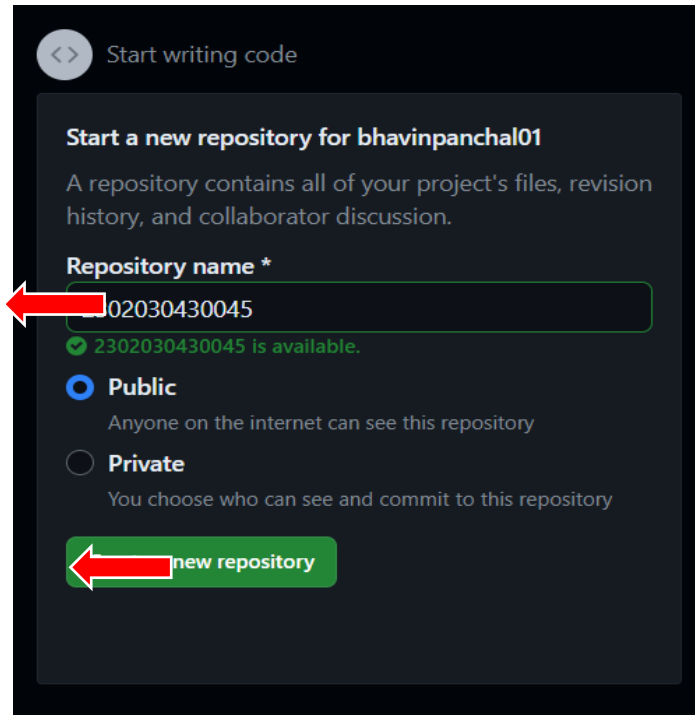

name your new repository...

☐ **Public**
Anyone on the internet can see this repository

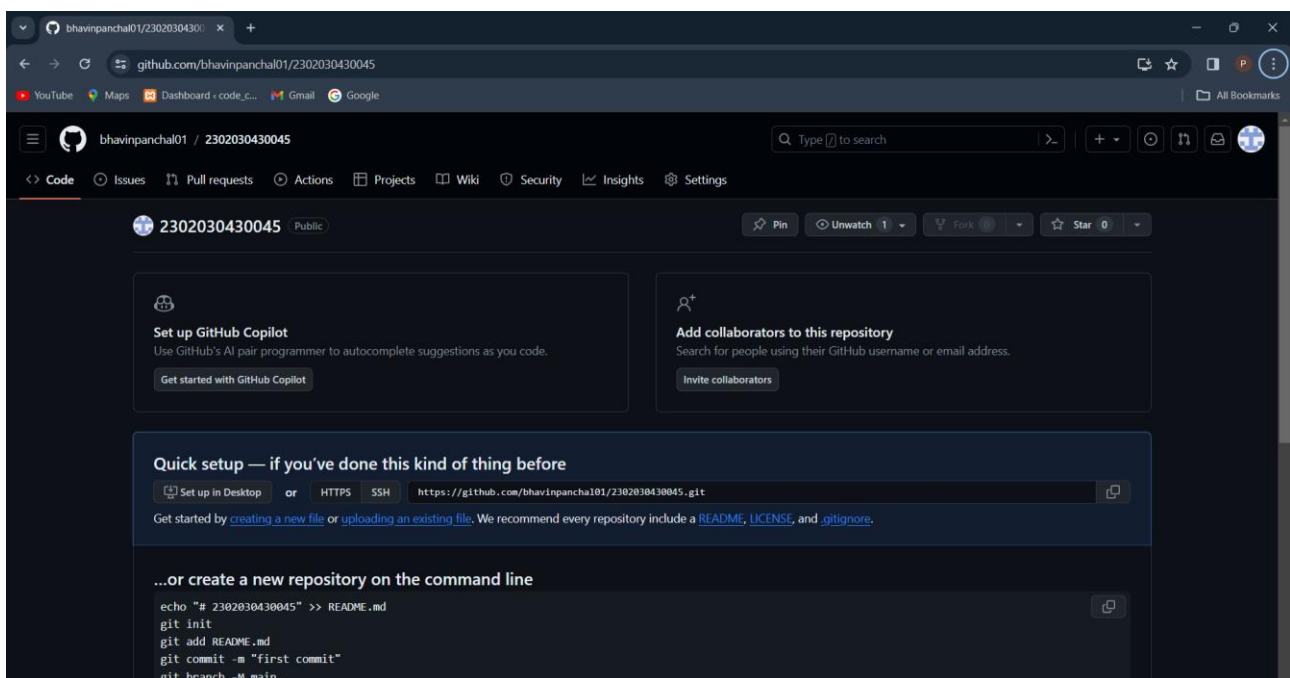

☒ **Private**
You choose who can see and commit to this repository

Create a new repository

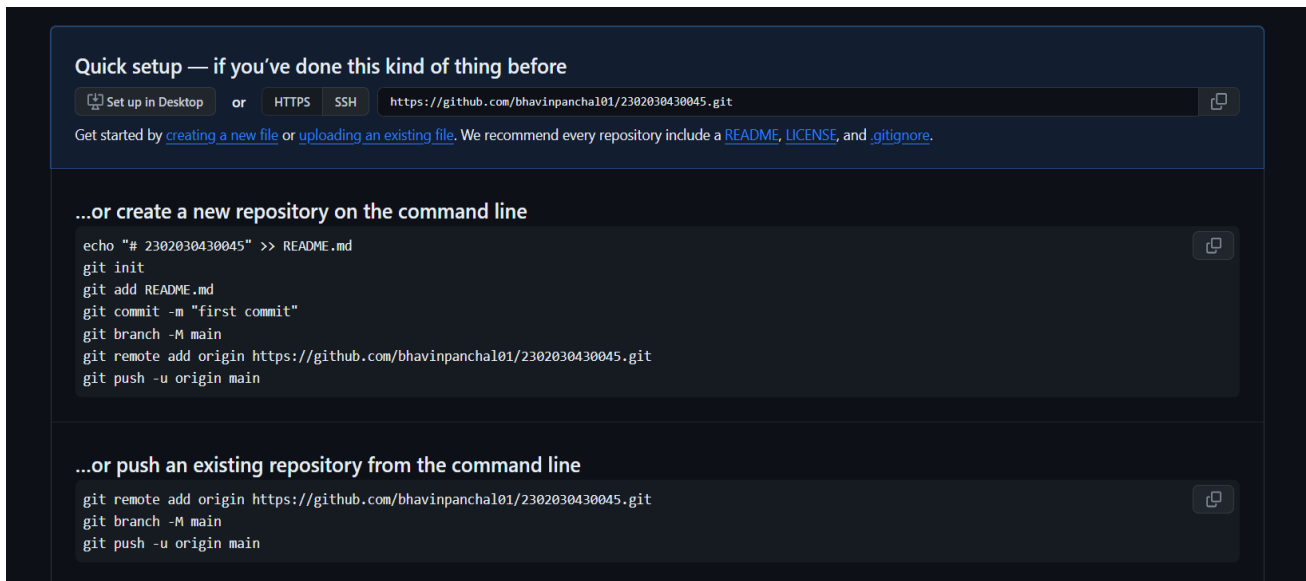

Step 2 : Give the name of the repository. Make it public or private by clicking on the given options. Add a README file if you want to. After that click on the “Create repository” button.

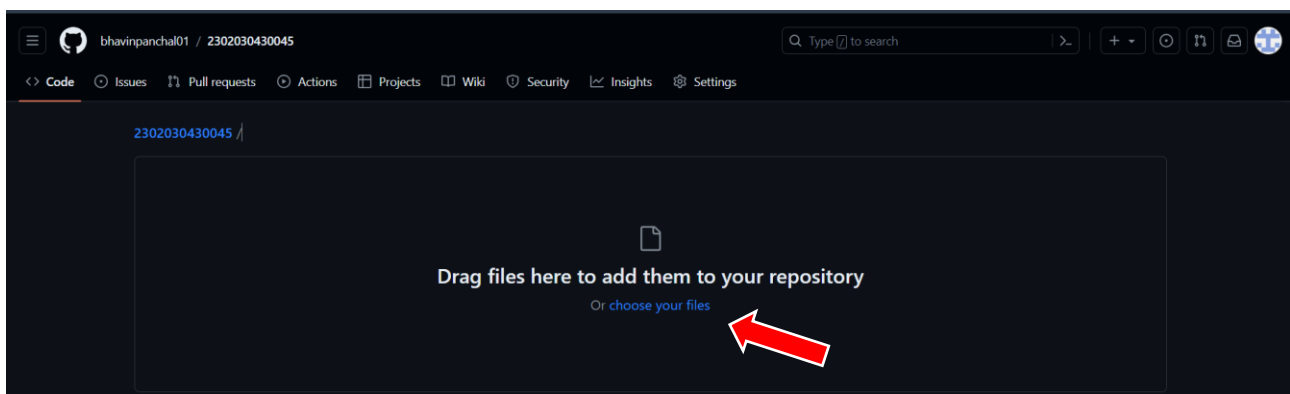

Like that, your GitHub repository has been created successfully.

Step 3 : Scroll down and you will see the option for importing code.

Step 4 : Click on “uploading an existing file” and you can start importing the code files and folders to your REPO or follow the commands and execute them.

Or you can Click on “choose files” then select files or folders and upload them.
